CANTERBURY, ORANGE COUNTY, N. Y.

---

**CHARLES HAMILTON, Proprietor.**

---

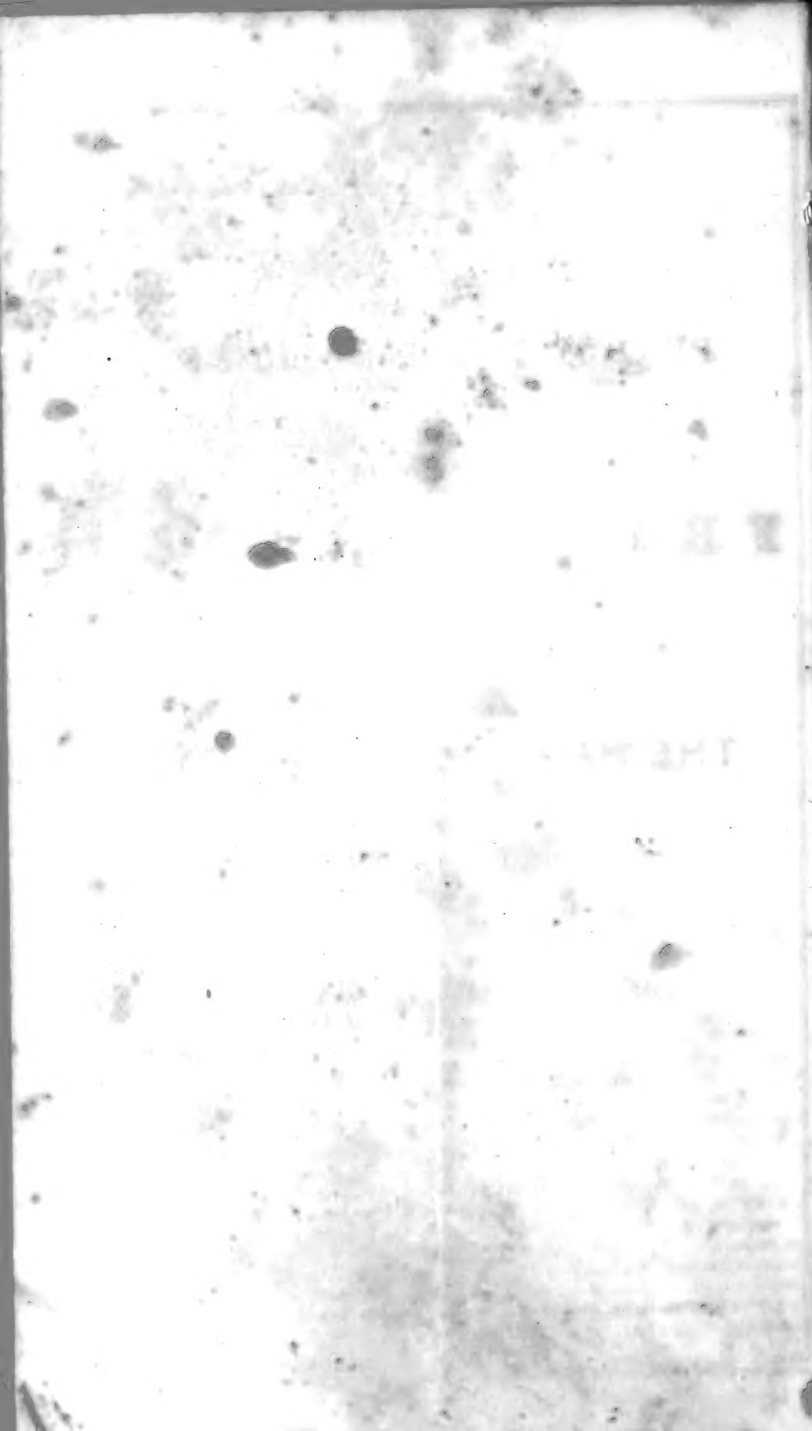

NEWBURGH.

S. T. CALLAHAN, PRINTER.

1848.

---

**Freight Paid to New-York or Albany.**

## P R E F A C E .

The Proprietor, in presenting to the public the following New Catalogue, would respectfully inform them, that, having made a very moderate commencement of the Nursery Business eight years ago, and for the last four years greatly enlarged his stock of trees, and added nearly or quite all of the really valuable varieties of Apples, Pears, Plums, Cherries, Peaches, Apricots, Nectarines, &c. &c., he is now prepared to supply them with handsome, thrifty and healthy trees, of good size.

And although unable to exhibit a long catalogue of time-honored predecessors in the business; or to shine forth in the borrowed rays of one of the satellites of Pomona, by being recommended to the public favor and confidence by them; nor yet to boast of thirty or forty years' experience in the business; yet still he can say, that he is entirely dependent on the integrity, intelligence, and satisfactory manner in which he shall conduct his business and serve the public. And he pledges himself that no reasonable efforts shall be wanting on his part to ensure their confidence, and to give entire satisfaction.

A large proportion of the varieties have been propagated from bearing trees; over sixty varieties of Plums have fruited on his own grounds; and nearly the whole collection have been obtained from Charles or A. J. Downing of Newburgh. And as the grafting or budding and marking of all his trees, is done with his own hands, assisted by his Son, who is soon to be Personally interested, and devoting his whole time to the cultivation of hardy fruit trees only, he confidently believes that the trees sent out by him are as correct as those from any other Nursery, in America or Europe.

Persons not sufficiently well acquainted with the different varieties to make a judicious selection, and who may choose to send their orders, designating the number of trees of each species of fruit wanted, as Apple, Pear, Plum, &c., may rest assured that a selection will be made according to the best judgment of the Proprietor; but when varieties are named, it would be desirable that liberty to substitute others, equally good, might be given, as no Nursery is always supplied with large trees, of every variety actually cultivated. But where single trees of any one variety shall be ordered, it will always be sent, if we have it, tho' small; as in such cases we shall consider that the VARIETY ESPECIALLY is wanted;—and although some of them may be exhausted by unexpected orders, yet every variety named, and some twenty besides, are actually possessed.

The proper seasons for transplanting, are from the 20th of October to the 1st of December in Autumn, and March and April in the spring. In those latitudes where the winters are not too severe, the autumn is preferable: and trees properly planted then, will be more sure to make a good growth the following season. All trees planted in the fall, where the winters are generally severe, should have the earth drawn up about the stems six or eight inches, previous to the freezing of the ground, which should be removed again in the spring.

All trees will be properly labelled and carefully packed, so as to be carried with safety and convenience, to any part of the United States or Europe; for which a charge of from twenty-five cents to one dollar per bundle will be made, and, when desired, insurance will be effected at the expense of the purchaser.

☞ **ORDERS FOR THE SOUTH AND WEST** should always be sent early in the fall. In the spring vegetation is often far advanced at the South and West before the frost will allow trees to be taken up at the North; and if sent at this season, they frequently vegetate considerably on the passage, and cause great loss and disappointment to the purchaser. In the fall, no difficulty of this kind will happen; and trees are annually sent to the Southern and Western States at that season, with entire success.

☞ To accommodate customers at a great distance, where freight and cartage make a large consideration, quite a large quantity of Apples, embracing not only the earliest and latest, but

the very best varieties, are annually grafted on small stocks below the top of the ground, and these, from two to four feet high, will be sold at \$10 per 100, without charge for packing.— Small trees of other varieties in proportion.

Those Nurserymen who boast of the SUPERIOR HARDHOOD of THEIR trees, in consequence of their proximity to the Ocean on one side and the East River on the other, with a free and open exposure to all winds, accompanied by great and frequent changes of temperature, and a degree of cold frequently below zero! will have performed a most Herculean task when they shall satisfy an intelligent public that young trees, by such severe SUFFERING WHEN YOUNG, acquire a degree of hardiness that will give them an advantage over those more favorably situated, till age shall give them that hardiness which they are incapable of possessing while young. And as evidence of the incorrectness of their mode of reasoning, I would refer the intelligent, and especially the experienced reader, to the great difficulty of getting young Pear seedlings through the severe winters of a Northern latitude, and the perfect hardiness of those same trees after attaining the age of two or three years.

The location of this Nursery is at Canterbury, Orange County, N. Y., four and a half miles South of Newburgh, and one and half from Cornwall Landing, which is the first landing above the Highlands, in a district of country well adapted to the growth of all the different varieties of fruit, and fruit trees, and especially so to the Plum, thousands of dollars being annually received for their Plums only, mostly of the Frost Gage variety.

Visitors may at all times find a conveyance from the Newburgh pier, at 4 o'clock, P. M., and have a pleasant passage up the noble Hudson, and a full view of the romantic scenery of the Highlands, and West Point Military Academy, and in four hours reach the village or Nursery.

### To Nurserymen and Fruit Growers.

Scions for Grafting or Budding will be furnished of every variety of Fruit in the Nursery that we may have to spare, and early orders can generally be filled of any of them, including all the Apples, and most other fruits described in the first two volumes of the Horticulturist. Buds or Grafts of Onondaga, Knight's Monarch, Van Mons, Leon, Le Clerc and Dunmore Pears, and Northern Spy and Rawle's Jannet Apples, &c., &c., can now be furnished, with all the choice varieties of Plums. The price in no case to exceed \$1 per 100, and small samples embracing fifty sorts at \$7 to \$10, ready packed and delivered at New York or Albany, free of freight. And all bundles of trees will be delivered at New York or Albany, and delivered there to any place, or person designated, without any charge, except for cartage.

 All Orders should be post paid, and from persons not acquainted with the Proprietor, either the cash or a draft on some bank or person in New York, will be expected; and all letters making inquiries, unless Post Paid, need not expect an answer.

Persons at a distance, ordering Fruit Trees and wishing Ornamental Trees, Shrubs and Plants, will be supplied with almost any variety desired, and at reasonable rates. European Mountain Ash, and a few others are constantly on hand. Also, Climbing Vines and Roses, with a select list of Noisette, Bourbon and Hybrid perpetual Roses, &c. Price 50 cents each.

CHARLES HAMILTON.

## APPLES.

Price, 25 cents—\$20 per hundred.

NAME.	SIZE.	QL 'Y.	SEASON.	REMARKS.
Alexander,	large	2	Sep. to Oct.	Very showy and handsome.

Van Zandt's Superb,	large	yellow	1	e. Aug.	Handsome and good.
Yellow Rareripe,	large	yellow	1	b. Aug.	Large and fine.

The above list is believed to include all that are really of the first quality, AND NONE OTHERS ARE WORTHY OF CULTIVATION. Several other varieties however are already possessed, and others will be obtained and proved, and such as shall be considered worthy will be propagated for sale. And as this delicious fruit appears to do better of late, and the trees are obtained so low, no one, we think, ought to neglect to plant out at least a few trees every year.

## APRICOTS.

Price 50 Cents on Plum Stocks—25 Cents on Peach Stocks.

NAME.	SIZE.	SEASON.	REMARKS.
Black, or Violet,	small	b. Aug.	Resembles a small purple pl'm
Blotch leaved Turkey,	large	m. Aug.	Rich, Juicy, and good.

Champagne,	pale red	Medium size, delicate and good
Black Naples, Black English,	black	Best bl'ck currant, very large.
Missouri Yellow Flowering,	blue	L'ge & pleasant, quite orn'm'tal.

## HINTS FOR TRANSPLANTING.

MOSTLY FROM A. J. DOWNING.

1. The inexperienced in Planting and Cultivating Fruit Trees, must consider that a tree is a living, nicely organized production, as certainly affected by good treatment as an animal.—Many an Orchard of trees, rudely thrust into the ground, struggles half a dozen years against the adverse condition before it recovers.

2. In planting an Orchard, let the ground be made mellow by repeated ploughing. For a tree of moderate size the hole should be dug three feet in diameter, and at least twenty inches deep. Turn over the soil several times, and, if not rich, mix thoroughly with some compost or well rotted manure. In every instance the hole ought to be large enough to admit all the roots easily, without bending. Shorten and pare smoothly with a knife, any bruised or broken roots; hold the tree upright, while another person, making the earth fine, gradually distributes it among the roots.  The main secret lies in carefully filling in the mould, so that every root, and even the smallest fibre, may meet the soil.  And to secure this, let the operator with his hand spread out the small roots, and fill in the fine earth nicely around every one. Nine tenths of the deaths by transplanting arise from the hollows left among the roots of trees by a rapid and careless mode of shovelling the earth among the roots.

3. A small quantity of straw or coarse manure, or green weeds thrown around the trees will be very beneficial, especially in dry seasons. But frequent surface watering is highly injurious, as it causes the top of the soil to bake so hard as to prevent the access of light and air, both of which, in a certain degree, are absolutely necessary.

4. Avoid the prevalent error, (so common and fatal in this country,) of planting your trees too deep; they should not be planted more than an inch deeper than they stood before. If they are likely to be thrown out by the frost the first winter, heap a little mound about the stem, to be removed again in the spring.

5. If your soil is positively bad, remove it from the holes and substitute a cart load or two of garden mould.  Do not forget that plants must have food.  Five times the common growth may be realized by preparing holes six feet in diameter and twice the usual depth, enriching and improving the soil by the plentiful addition of good compost. Young trees cannot be expected to thrive well in SOD LAND. When a young orchard must be kept in grass, a circle should be kept dug around each tree. But cultivation and manuring of the land will cause the trees to advance more rapidly in five years, than they will in ten, when it is allowed to remain in grass.
